2. Citations and explanations (Rule 70.7)

The invention is a reusable mailable card including a first panel having a major front face to receive an image or text and a major rear face. A second panel including a first portion securable to the first panel so as to provide in combination with the first panel a pocket to receive a relatively flat data storage medium and a second portion associated with the first portion and securable to the rear face to close the pocket. Securing means manipulated by a user to secure the second portion to the rear face to close the pocket, an opening means manipulated by a user to permit removal of said medium from said pocket and means to reclose said pocket to permit said card to be remailed. While FR 2838671 (published prior to the international filing date but later than the priority date of the present application) and JP 2000-168874 both provide a pocket to receive a relatively flat data storage medium, neither provides means to reclose said pocket to permit said card to be remailed. No prior art was found which provided such a card including a pocket to receive a relatively flat data storage medium and means to reclose said pocket to permit said card to be remailed.

A MAILABLE CARD

Field of the Invention

The present invention relates to mailable cards and, in particular, to a postcard or direct mailing card having a pocket for an information storage device.

Background of the invention

Referring to common postcards as an example only, when travellers visit destinations of interest it is common to purchase postcards, or the like, displaying the particular destination. The postcards are then sent to family and friends providing a snap shot of the travel destination being experienced.

Postcards normally include a single piece of hardened sheet material having an address and writing portion on one side and a photographic representation of a travel destination on the other side.

The disadvantage of a common postcard is that it only provides the recipient with a static view of the travel destination. Some postcards may include a small description of the destination, however, very limited information about the travel destination is conveyed.

To provide the recipient with more details of a travel destination it is also known to link a number of postcards together to form a concertina type booklet showing a number of different photographic representations. The disadvantage of these booklets are that they still do not provide sufficient information about the travel destination, they are not interactive and the booklets are not suitable for mailing at minimum cost.

Similar problems also arise with postcard style cards given away in shops, theatres, cases or the like and the increased use of direct mailing cards in advertising. All these types of mailable cards are unable to provide sufficient information whilst being able to be mailed at minimum cost.

Object of the Invention

It is an object of the present invention to overcome or ameliorate some of the disadvantages of the prior art, or at least to provide a useful alternative.

2

Summary of the Invention

There is firstly disclosed herein a reusable mailable card including:

a first panel of generally rectangular configuration so as to have a pair of side edges and a pair of end edges extending between the side edges, the first panel also having a major front face to receive an image or text and a major rear face;

a second panel including a first portion securable to the first panel so as to provide in combination with the first panel a pocket to receive a relatively flat data storage medium, and a second portion associated with the first portion and securable to the rear face to close the pocket;

securing means manipulated by a user to secure the second portion to the rear face to close the pocket;

an opening means manipulated by a user to permit removal of said object from said pocket; and

means to reclose said pocket to permit said card to be remailed.

Preferably, said card is formed of a single sheet of card material folded about a line parallel to said end edges to define said first and second panels.

Preferably, said first panel includes first and second flap portions foldable about said side edges and adjacent said second panel.

Preferably, said first portion of said second panel is securable to said flap portions to close the pocket.

Preferably, including a lip for receipt of said flap portions to reseal said packet to prevent said card to be remailed.

Preferably, said securing means includes an adhesive strip along an edge of said second portion.

Preferably, said opening means includes a detachable panel defined by a line of perforations.

Preferably, said detachable panel provides an opening in said second panel, whereby when said first panel is secured to said second panel, manipulation by a user of said detachable panel permits removal of said object from said pocket.

Preferably, said second panel includes a flap member.

Preferably, said flap member in use is moveable between a closed position substantially parallel to a plane of said panels and an open position substantially normal to a plane of said panels.

3

Preferably, said flap member when in said open position forms a stand for said card,

Preferably, said data storage medium is a mini compact disc, mini digital video disc or CD-ROM.

Brief Description of the Drawings

A preferred form of the present invention will now be described, by way of example only, with reference to the accompanying drawings wherein:

Figure 1 is a front unfolded view of a blank for a mailable card of a first embodiment of the invention;

Figure 2 is a back view of Figure 1;

Figure 3 is Figure 2 in a folded configuration;

Figure 4 is a perspective view of Figure 3 with the stand in an open position;

Figure 5 is a front unfolded view of a blank for a card of an alternate embodiment of the invention;

Figure 6 is a back view of Figure 5 in a folded configuration;

Figure 7 is a perspective view of Figure 6 with the stand in an open position;

Figure 8 is a front unfolded view of a blank for a card of an alternate embodiment of the invention;

Figure 9 is a back view of Figure 8 in a folded configuration with the seal open;

Figure 10 is a back view of Figure 8 in a folded configuration with the seal closed;

Figure 11 is a perspective view of Figure 8 with the stand in an open position;

Figure 12 is a front unfolded view of a blank for a card of an alternate embodiment of the invention;

Figure 13 is a back view of Figure 12;

Figure 14 is Figure 13 in a partially folded configuration;

Figure 15 is Figure 13 in a fully folded configuration;

7

The claims defining the invention are as follows:-

1. A reusable mailable card including:

a first panel of generally rectangular configuration so as to have a pair of side edges and a pair of end edges extending between the side edges, the first panel also having a major front face to receive an image or text and a major rear face;

a second panel including a first portion securable to the first panel so as to provide in combination with the first panel a pocket to receive a relatively flat data storage medium, and a second portion associated with the first portion and securable to the rear face to close the pocket;

securing means manipulated by a user to secure the second portion to the rear face to close the pocket;

an opening means manipulated by a user to permit removal of said object from said pocket; and

means to reclose said pocket to permit said card to be remailed.

- 2. The mailable card of claim 1, wherein the card is formed of a single sheet of card material folded about a line parallel to said end edges to define said first and second panels.
 - 3. The mailable card of claim 1 or claim 2, wherein said first panel includes first and second flap portions foldable about said side edges and adjacent said second panel.
 - 4. The mailable card of claim 3, wherein said first portion of said second panel is securable to said flap portions to close the pocket.
 - 5. The mailable card of claim 3 or 4, including a lip for receipt of said flap portions to reseal said pocket to permit said card to be remailed.
- 6. The mailable card of any one of the preceding claims, wherein said securing means includes an adhesive strip along an edge of said second portion.
- 7. The mailable card of any one of the preceding claims, wherein said opening means includes a detachable panel defined by a line of perforations.
- 8. The mailable card of claim 7, wherein said detachable panel provides an opening in said second panel, whereby when said first panel is secured to said second panel, manipulation by a user of said detachable panel permits removal of said object from said pocket.
 - 9. The mailable card of any one of the preceding claims, wherein said second panel includes a flap member.

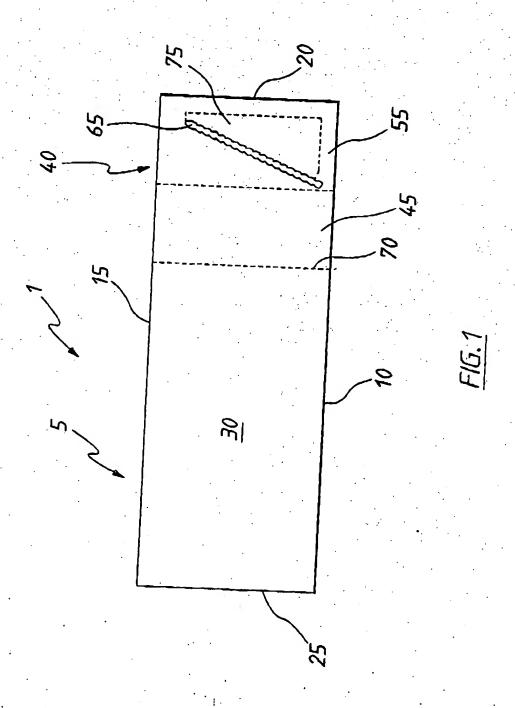

20

25

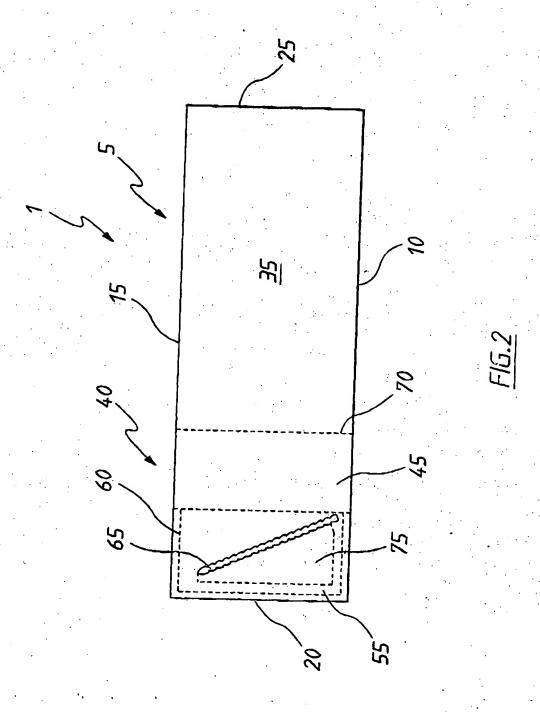

PCT/AU2004/001311 Received 26 April 2005

8

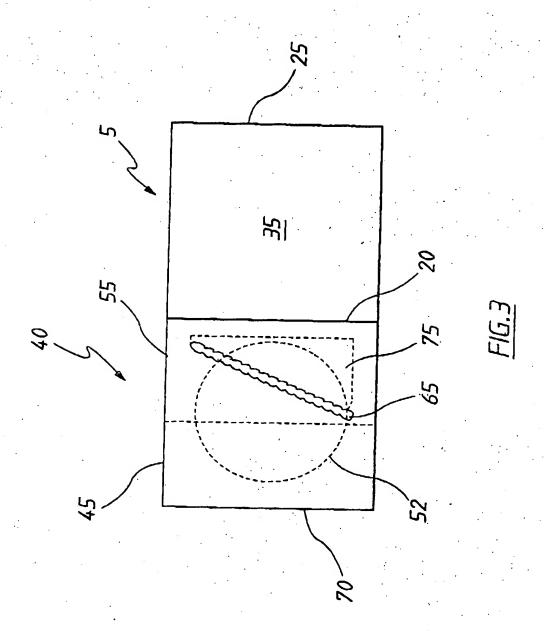

- 10. The mailable card of claim 9, wherein said flap member in use is moveable between a closed position substantially parallel to a plane of said panels and an open position substantially normal to a plane of said panels.
- 11. The mailable card of claim 10, wherein said flap member when in said open position forms a stand for said card.
- 12. The mailable card of any one of the preceding claims, wherein said data storage medium is a mini compact disc, mini digital video disc or CD-ROM.
